Overview

MERRAND is a mobile errands system that runs on all technological platforms. It is a bridge between service providers and the general public.

Goals

1. Give its users a platform to access a directory of service providers in a specified radius

2. Give service providers a platform to market their services to a narrowed and specific market

3. Provide a peer to peer deliveries platform within a specific radius.

4. Be an intermediary between suppliers and consumers and handle the financial transactions for a certain fee.

5. Provide a carpooling service

Specifications

Platforms

1. Web application (running on any web browser)
2. IOS application
3. Android Application
4. Desktop Application

Milestones

I. Feasibility study

II. Create system flow and visual application use cases

III. Create applications for each platform based on user demand

IV. Use a waterfall model for evaluation and monitoring of the system.

V. Deploy the system
